## About Me

I've always believed that opportunities are always there but they need sharp eyes to grasp and catch them. As a BBA student in my years at University, I developed a strong feeling to diversify my self from others. I've always sought to explore more things beside what I was taught. I studied finance, management, marketing... etc, tools and concepts that are essential for Business. I master the major office softwares such as Word, Excel, PowerPoint, and Publisher. Beside all of this, I had and still have a strong passion for IT and Graphic design. I have always been fascinated about websites, and how they work. That's why I started to learn web programming. I started to study by my own about network engineering, I have solid knowledge about computers and I have a passion for everything about computers.

As you can see from this small resumee about me, I'm not an idle person who likes to do nothing of his time, in fact, I try to use my time wisely to learn many things that are useful, or to sharpen my skills.

## Important note about me

I'm a professional graphic designer, I design logos, flyers, banners, social media ads...etc. You could see all my designs on my Facebook page @katagafegd.
